

CUSTOMER SUCCESS

Welcome to Northstar Analytics

Customer Support Onboarding

Master ticket triage, CRM navigation, and escalation procedures to deliver consistent customer support from day one.

▶ **START**

Learning Objectives

Identify ticket types and assign correct priority levels

Navigate the Northstar CRM workflow with confidence

Apply escalation procedures accurately and efficiently

Demonstrate customer-centered communication skills

Resolve common issues using available support tools

Meet the Team

Jordan Lee

Customer Success Manager

Oversees customer relationships and team performance. Contact for account-level concerns or performance feedback.

Taylor Morgan

Support Lead

Handles escalations and complex technical issues. Contact when a technical issue exceeds your resolution ability.

Alex Rivera

Escalation Specialist

Supports high-priority and security-related cases. Contact immediately for data risks or multi-customer outages.

Northstar CRM

Your main workspace for managing customer tickets from intake to resolution.

View incoming requests

Update ticket status

Assign priority levels

Communicate with customers

Escalate issues

• • • Northstar CRM — Ticket Queue

ID	CUSTOMER	ISSUE	PRIORITY
#4421	Acme Corp	Login failure	HIGH
#4420	Beta LLC	Report export error	MEDIUM
#4419	Gamma Inc.	UI display glitch	LOW
#4418	Delta Co.	API timeout	HIGH
#4417	Epsilon Ltd.	Password reset	LOW

Ticket Lifecycle

Understanding ticket status helps teams prioritize work and prevent delays.

← Back

Next →

Understanding Priority Levels

HIGH

- System outage or security incident
- Affects multiple users or has revenue impact
- Escalate immediately — do not delay

MEDIUM

- Functionality issue affecting workflow
- Workaround available but disruptive
- Address within same business day

LOW

- General questions or minor UI bugs
- No immediate business impact
- Queue for standard resolution window

Prioritize based on business impact, user scope, and operational urgency.

Quick Check

Which priority level is most appropriate for this ticket?

"I'm trying to pull our quarterly analytics report for our board meeting in 10 minutes, but the export button is greyed out."

A Low — it's a single user with a minor UI issue

B Medium — it's a functionality issue with no confirmed workaround

C High — the business impact is immediate and revenue-affecting

Correct!

Answer C is correct.

Although only one user reported it, the board meeting context creates immediate, time-sensitive revenue impact. That shifts this ticket from Medium to High Priority — the business consequence is what drives the classification, not the number of users affected.

Key Takeaway

Major outages should be escalated immediately while investigation continues. When business impact is time-sensitive, act first — document as you go.

Continue →

Not Quite

Think about the business context, not just the technical issue.

A single greyed-out button might seem minor — but the customer has a board meeting in 10 minutes. That time pressure creates immediate revenue and reputational impact, which is the defining factor for High Priority classification.

A Low Priority — Incorrect — the issue is time-critical. A single user with a board meeting in minutes carries significant business impact.

B Medium Priority — Close, but not quite. Medium assumes the situation can wait. The 10-minute window makes this immediately revenue-affecting.

← Try Again

When to Escalate

Escalate When:

- ! Issue impacts multiple customers simultaneously
- ! Security or data breach risks are involved
- ! No resolution available at your current level
- ! Customer frustration persists after multiple attempts

Escalation Steps:

- 1 Review all ticket details thoroughly
- 2 Document every action taken so far
- 3 Notify Taylor (technical issues) or Alex (security/multi-customer outages)
- 4 Transfer ticket ownership in CRM

Next →

Customer Scenario

A customer reports they cannot access their dashboard and receive a "Permission Denied" access error. They say:

"This is blocking my entire team from working."

What do you do first?

- A Escalate immediately without further investigation
- B Ask for more details and verify account permissions
- C Close the ticket as a user error

Good Decision!

Answer B is correct: gather details and verify permissions first.

Collecting details and verifying account permissions ensures you understand the root cause before escalating. Premature escalation slows resolution and reduces escalation team efficiency.

Continue →

Not Quite

A

Escalate immediately — Incorrect — escalating without investigation leads to wasted escalation resources and a poor customer experience.

C

Close as user error — Incorrect — never close a ticket without verifying. A team-wide outage requires proper investigation.

Customer Communication

Be Clear & Concise

Plain language. State the issue, next step, and expected timeline.

Acknowledge the Issue

Open every interaction by confirming you understand the problem.

Avoid Technical Jargon

Avoid internal terminology, acronyms, or system language unfamiliar to customers.

Provide Regular Updates

Update customers even when there is no resolution yet.

Confirm Before Closing

Verify the customer considers the issue resolved before closing.

Confirm Before Closing

Verify the customer considers the issue resolved before closing.

What You've Learned

Navigate the Northstar CRM system and manage your ticket queue

Classify and prioritize tickets by business impact (High / Medium / Low)

Follow escalation procedures: document, notify, and transfer ownership

Communicate clearly and professionally with customers throughout the support lifecycle

You are now prepared to begin handling real customer tickets with confidence.
